## ALPRO® – safety and comfort!

**“Comfort is the important thing!”** – That’s what everyone who is often on their feet for a long time every day says is the most important quality of their shoes. **“Safety is the important thing!”** – This is the answer one gets to the same question when it is posed to employers, professional associations and occupational insurance associations. Both characteristics are combined in the sandals and clogs of ALPRO® in a truly unique way.

All ALPRO® models have been tested by TÜV Rheinland, which means that they are safe!

All ALPRO® models have an anatomically formed footbed “by Birkenstock” and support your feet in a natural manner, thereby providing particular comfort.

Simply perfect when on the job!  
Your ALPRO®-Team

**Medical professions**

# The ALPRO® moulded sole

Firm stand, safe tread, slip-resistant profile

Especially in medical professions it is important to be able to trust one's equipment blindly. Therefore ALPRO® has developed the cork models, which offer comfort and protection tested by TÜV (German Technical Inspection Agency) due to special ALPRO® moulded sole – including slip resistance.

## Characteristics of the ALPRO® moulded sole:

- slip-resistant, tested by TÜV (German Technical Inspection Agency) in accordance with EN ISO 13287:2007, SRA
- larger tread surface, improved standing properties
- especially light and cushioning
- cast, not punched: non-marking on floors

**Note:** Thanks to the sliding heel strap, all C 165 clogs can be worn as a slipper both during and after work.

€ 584 531 • size 39-46

## Characteristics of the original super-grip sole:

Based on its special structure with highly effective cushioning layers, the super-grip sole offers additional comfort. The EVA midsole automatically compensates for any ground unevenness, and the oil- and grease-resistant rubber tread sole has a slip-resistant effect, in addition to fulfilling the regulatory requirements of EN ISO 13287:2007, SRC. These properties make the super-grip sole the perfect choice for daily use in hospitals, laboratories and operating theatres.

# The ALPRO® soft footbed

Immediately soft – sandals and clogs your feet will love from the very first step

The ALPRO® soft footbed is much more than 'just' soft cushioning – the complete footbed consists of millions of microscopic air bubbles spread throughout the ALPRO® foam. In combination with the permanently elastic latex heel cushion, these tiny air bubbles promote healthy movement with every step, whilst relieving pressure from muscles when standing for long periods.

- Slip-resistant profile, tested by TÜV in accordance with EN ISO 13287:2007, SRC.
- Footbed centre made of ALPRO®-foam: millions of microscopic bubbles offer the best cushioning.
- Latex heel cushion has a shock-absorbing effect with every step.
- Suede lining on the sole creates a pleasantly soft feel.

Before physical strain.

During physical strain.

In motion.

When walking on different surfaces, people gradually build up an electric charge. Given that even the smallest electrostatic discharge can lead to serious complications in operating theatres or intensive care wards, effective countermeasures must be taken.

Antistatic clogs made of ALPRO®-foam protect intensive care patients and sensitive operating theatre technology from such hazardous discharges. Charges are gently dissipated and larger electrostatic pulses are prevented.

All A 650 and A 650 Air operating theatre clogs are equipped with replaceable antistatic footbeds. The A 470 AS clogs have an integrated, preformed footbed that, like the entire clog, is made of a flexible, antistatic foam mixture.

# Tested for safety, perfect protection!

The ISO standards are valid worldwide for protective and professional footwear

## The EN ISO standards

At the end of the 90s, a series of pan-European regulations were established for protective, professional and safety footwear. Based on the following regulations, TÜV Rheinland (German Technical Inspection Agency) tests and approves ALPRO® models.

- **EN ISO 20344:** Requirements and test methods
- **EN ISO 20345:** Safety footwear specifications
- **EN ISO 20346:** Protective footwear specifications
- **EN ISO 20347:** Occupational footwear specifications

Professional footwear refers to all shoes that have slip-resistant, antistatic or similar qualities. Generally speaking, occupational shoes are not equipped with any special toe protection.

Models with toe protection are grouped in the categories of protective footwear (e.g. plastic caps, test energy up to 100 joules) or safety footwear (steel toe caps, test energy up to 200 joules).

## Classification of standards

**SB:** Standard (refers to general basic requirements; open-heel models can also be part of this classification);

**S1:** Standard safety footwear = SB + antistatic + energy absorption in heel area;

**S2:** Standard safety footwear for wet areas;

**S3:** Standard safety footwear for wet areas with puncture-resistant, profiled sole and closed-heel area

## ALPRO® models certified in accordance with DIN ISO-standards

**The majority of ALPRO® models meet one of the EN ISO professional footwear standards.**

The ALPRO® PU-clogs without steel toe cap comply with the **EN ISO 20347:2007, SRC, E, OB** standard.

The soles of our ALPRO® models have been tested by TÜV Rheinland in accordance with EN ISO 13287:2007. This regulation specifies that at least one of the following three categories must be fulfilled:

- **SRA** – Slip resistance on ceramic tiles with cleaning agent
- **SRB** – Slip resistance on steel floors with glycerol
- **SRC** – Slip resistance on ceramic tiles with cleaning agent and on steel floors with glycerol

ALPRO® sandals and clogs with soft footbed and super-grip sole and ALPRO® PU-clogs have passed the SRC category. ALPRO® models with the ALPRO® moulded sole meet the SRA category.

**In short: with ALPRO®, you're guaranteed to be sure-footed!**

## ALPRO® clog A 640 with steel toe cap certified in accordance with EN ISO 20345:2007

The slip resistance of Clog A 640 with steel toe cap was tested by TÜV Rheinland in accordance with EN ISO 20345:2007, SRC.

### Positive results:

The sole profile is slip-resistant on ceramic tiles with cleaning agent and on steel floors with glycerol.

# The ALPRO® super-grip sole

Slip-resistant, flexible, resistant to oil- and grease

Like a sandwich, the super-grip sole has a soft elastic EVA midsole between the tested anti-slip rubber tread sole (EN ISO 13287:2007, SRC) and the cushioning cork-latex footbed. This compensates for any floor unevenness and promotes healthy movement when walking.

## Characteristics of the original super-grip sole:

Based on its special structure with highly effective cushioning layers, the super-grip sole offers additional comfort. The EVA midsole automatically compensates for any ground unevenness, and the oil- and grease-resistant rubber tread sole has a slip-resistant effect, in addition to fulfilling the regulatory requirements of EN ISO 13287:2007, SRC. These properties make the super-grip sole the perfect choice for daily use in kitchens and in the gastronomy.

Service professions

# The ALPRO® moulded sole

Slip-resistant, cushioning, singly cast

Contrary to other soles, the ALPRO® moulded sole, as the name already explains, is not punched, but singly cast. Therefore it does not leave marks on even floors and has a very slip-resistant effect on ceramic tiles with cleaning agent (tested by TÜV Rheinland based on EN ISO 13287:2007, SRA).

- cast, not punched: non-marking on floors

# ALPRO® with heel straps

Firm grip, reliable slip resistance, soft tread

Heel straps are obligatory in many professions for a good reason. Only this way can the shoe fit firmly on the foot without slipping off. In-depth guidelines concerning the criteria to be followed when purchasing shoes for use in kitchens, the catering and gastronomy sector should be obtained from your employer and employer's liability insurance association.

## Characteristics of the ALPRO® ProFashion-sole:

## “Made in Germany” – more than just a statement of place

Shoes from Germany have an outstanding international reputation. And justifiably so!

The quality standards of German products are found nowhere else in the world. With ALPRO® you feel this with every step. Product development, production, marketing and sales are centrally organised from Rheinland-Pfalz.

“Made in Germany” has been a duty as well as an honour for ALPRO®, since the founding of the company in 1993. Always being directly on location, further developing our shoes together with our partners, as well as ensuring our high level of quality in this way, are inseparable from our company philosophy!

We remain exclusively in Germany, thanks to technological progress and German engineering that consistently represents the state of the art. As a result, we have optimised and efficiently coordinated many processes in the past years. For instance, we were able to achieve a doubling of the shoe-press operations with improved quality and compliance with the latest environmental standards.

## Service professions

The soft footbeds by ALPRO® offer an extremely soft and pleasant comfort from the first step on. The ultra flexible foam structure of the bedding is very cushioning – ideal for all those, who have to be on their feet all day.

# Sustainability and environment

## Environmentally friendly production methods with every step

### Following nature's example

Every ALPRO® model takes its inspiration from nature. Nevertheless, our sandals and clogs are not only developed and produced based on anatomical considerations. During the entire production process, we work in close compliance with the latest environmental standards. And have been doing so since well before the topic became so prolific.

### Sustainable production

Since the company was founded in 1993, we select our suppliers and producers based on a range of measures to protect the environment, including resource-friendly, CFC-free production methods, low-energy buildings, and warm-water generation from photovoltaic systems.

All of this has helped us to reduce our energy consumption by over 95% in the last 15 years – our suppliers and production plants included.

### Modern recycling

All surplus ALPRO®-foam and ALPRO®-cell materials left over from sole production are reused – for instance, in the construction of children's play parks or sports centres, or as flooring or insulating material for noise protection. All of our cardboard boxes and packaging materials are completely recycled, too. In order to achieve this along with all of our customers and stockists, we have signed a waste disposal contract with Interseroh. This guarantees the correct and sustainable disposal of all ALPRO® delivery and packaging materials.

### Responsible catalogue production

Our commitment to the environment is not only limited to direct production methods. The ALPRO® catalogue is also printed on environmentally friendly FSC® paper: Paper with FSC® certification is produced in complete harmony with the environment – its components are yielded exclusively from sources of responsible forestry. In such practices, the sensitive 'forest' ecosystem is encroached upon as little as possible. Nature is given enough time to regenerate and the forestry industry intervenes only when completely necessary.

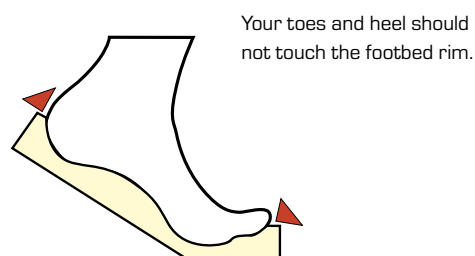

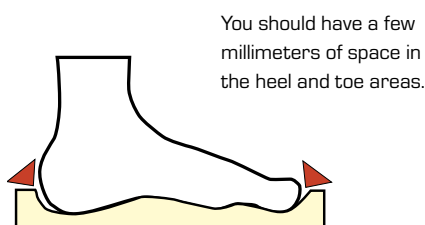

### The ALPRO® guarantee

We guarantee that our activities on all levels fully comply with the latest European environmental standards – incidentally, the most demanding in the world. We are able to do this because our production processes are carried out with the finest partners exclusively in Germany. Only those who meet our high requirements can collaborate with us in the production of ALPRO® shoes.

**This is something you can rely on in the future, too!**

Selecting the correct length is just as important as choosing the proper width.

# ALPRO® PU-clogs

Optimal protection – with or without steel toe cap

The ALPRO®-foam clogs with and without steel toe cap are an indispensable part of every-day life in the kitchen and food industry. They are equipped with an replaceable anatomically formed cork footbed and are washable up to 60° C.

The high heel portion prevents the foot from sliding out and creates a firm grip inside the clog.

The soft footbed lining made of suede ensures excellent moisture absorption and regulates the temperature of the foot.

The smooth surface prevents the absorption of liquids, oil, grease and chemicals.

The deep heel cup keeps the foot firmly inside the footbed and ensures a reliable grip.

The distinct tread offers a firm, slip-resistant hold when walking and standing – even on steel floors and ceramic tiles.

Steel toe cap (A640) protects the foot from falling objects.

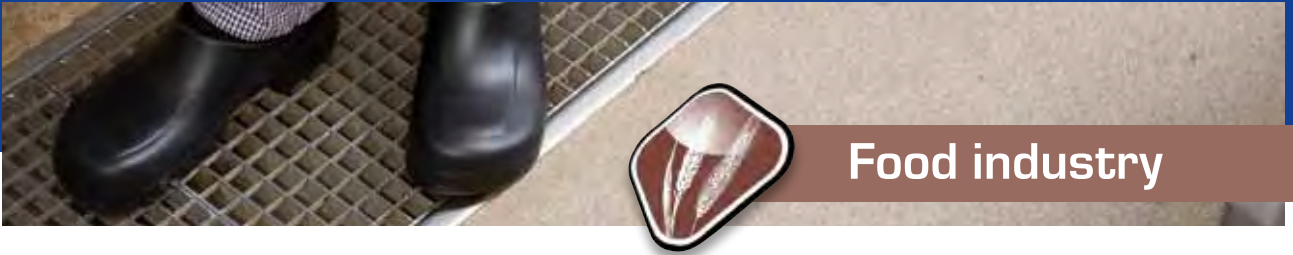

A 640 with steel toe cap

The complete protection – including pleasant comfort and optimal cushioning.

## The ALPRO® soft footbed:

In contrast to a soft sole with just one cushioning layer, the entire ALPRO® soft footbed consists of an infinity of tiny air cushions.

Three elements promote natural movement whilst relieving muscles:

- **Footbed centre made of ALPRO®-foam:** millions of microscopic bubbles offer the best cushioning.
- **Latex heel cushion** has a shock-absorbing effect with every step.
- **Suede lining** on the sole creates a pleasantly soft feel.

# The comfortable ALPRO® sandals

The flexible soft footbed for unrivalled comfort

The ALPRO® slippers with soft footbeds are ideal to wear at home and in the office. These models offer comfortable, well-deserved relaxation before, during and after work. The flexible material of the footbed made of ALPRO®-foam is enjoyably soft and has an immediate positive effect from the first step on.

The deep heel cup keeps the foot firmly inside the footbed and ensures a reliable grip.

The soft footbed lining made of suede ensures excellent moisture absorption and regulates the temperature of the foot.

Toe bar guides the toes, promoting the natural rolling movement of the foot.

Heel cushion made of latex – tested by TÜV Rheinland based on EN ISO 19956:2004.

Longitudinal and transversal arch support give the foot a sturdy grip on the bed and encourage natural movement.

The slip-resistant outsole is especially light, cushioning and non-marking on floors.

The footbed rim protects the toes and heel from bumps and bashes.

## Characteristics of the ALPRO® ProFashion-sole:

- cushioning and flexible
- imperishable and abrasion-proof
- resistant to oil and grease
- profile depth > 2.5 mm
- slip-resistant, TÜV-tested in accordance with EN ISO 13287: 2007, SRC

Our antistatic sandals and clogs for reliable protection against electrostatic discharge in professions in ESD environments.

**ESD professions**

# The right ESD model for everyone!

Professional ESD antistatic protection in accordance with EN ISO 61340

In the ESD collection  
by ALPRO® you have  
a choice between:

- **three cushioning footbed types:**  
soft footbed, original cork-footbed  
or cork soft bedding;
- **two sturdy upper materials:**  
comfortable natural leather  
or soft Birko-Flor;
- **two types of sole:** the extra light original-  
punched sole (EVA) or the pronounced  
form sole (ALPRO®-foam) of the soft  
footbed (profile depth > 2.5 mm).

# ESD models with cork-footbed

The current EN ISO standards for ESD shoes

ALPRO® ESD sandals and clogs have been tested by TÜV Rheinland. All ALPRO® ESD models fully comply with EN ISO 61340 in the recommended contact resistance range between  $10^5$  and  $3.4 \times 10^7$  ohm.

## Danger: electrostatic discharges

ESD is the international abbreviation for electrostatic discharge. When two objects with different charges attract, a charge equalisation occurs – often in the form of a visible spark or electric shock within the timeframe of a microsecond.

For humans, this discharge can only be felt when it exceeds 3,000 volts. Nevertheless, 30 volts are enough to damage electronic components, and charges as low as five volts can cause serious damage or even destroy sensitive high-frequency and semiconductor products such as microchips and PCBs.

As a result of this, anyone who works with such sensitive components – and/or wants to save themselves and others from unpleasant shocks – requires professional equipment to protect against hazardous discharges and to prevent components from being destroyed.

## Protection: footwear with ESD resistance

In accordance with EN ISO 61340, ESD shoes provide reliable protection against the aforementioned danger of electrostatic discharge in the recommended contact resistance range between  $10^5$  and  $3.4 \times 10^7$  ohm.

In order to ensure that ESD shoes are effective, special conductive flooring must be fitted correctly. The following factors should also be considered concerning electrostatic dissipation: interaction between various ground types and different sole materials (PU, EVA), clothing, type of touch and climate.

## ALPRO® ESD models are tested in accordance with EN ISO

ALPRO® ESD sandals and clogs have been tested by TÜV Rheinland. All ALPRO® ESD models fully comply with EN ISO 61340 in the recommended contact resistance range between  $10^5$  and  $3.4 \times 10^7$  ohm.

## Characteristics of the original ESD cork footbed

### The anatomic form

offers generous space for toes and feet, supports balance and nurtures healthy feet.

### The toe bar

guides the toes, promoting the natural rolling movement of the foot.

### The integrated static inhibitor

ensures permanent, gentle dissipation of electrostatic charges.

### The distinct footbed shape

fits the natural form of the sole of the foot.

### The cushioning cork centre

adapts perfectly to the sole of the foot.

### The deep heel cup

keeps the foot firmly inside the footbed and ensures a natural grip.

## ESD professions

**Note:** All ESD clogs on this page have a special air-permeable surface structure in a carbon linear design for foot temperature regulation.

# The ALPRO® soft bedding ESD

Optimal protection and soft comfort

## ESD soft bedding structure

1. Suede
2. Natural rubber foam
3. Upper jute layer
4. Cork-latex centre
5. Lower jute layer

Different kinds of flooring automatically cause electrostatic charges to build. Subsequent contact with patients, medical devices or conductive materials creates a sudden, jolting discharge. Sparks occur, and the individual receives a brief 'shock'.

ALPRO® ESD models help to prevent electric shocks in a resistance range from  $10^5$  to  $3.4 \times 10^7$  ohm [in accordance with EN ISO 61340].

### Flexible ALPRO®-foam

used as a base material ensures comfortable, soft cushioning.

### The deep heel cup

keeps the foot firmly inside the footbed and ensures a natural grip.

# The ALPRO® ESD soft footbed

ESD function tested by TÜV in accordance with EN ISO 61340

Contact with sensitive high-frequency technology and electronic components requires increased safety measures. In combination with the general ESD equipment in the workplace, the ALPRO® ESD models provide effective protection against unintentional electrostatic discharges.

ESD is the international abbreviation for electrostatic discharge. ESD refers to the rapid and sudden transfer of an electric charge after unnoticed build-up.

The ALPRO® ESD models prevent this unpleasant effect. They meet all requirements in the professional ESD sector from  $10^5$  to  $3.4 \times 10^7$  ohm in accordance with EN ISO 61340. Possible areas of use are working environments with sensitive high-frequency and semiconductor technology, at medical or pharmaceutical companies, but also with customer contact and at home.

# ALPRO® knee protection

## Knee protectors and knee cushions

ALPRO® knee protectors and knee cushions serve as a relief while performing work in a kneeling position on the ground or near the ground. They distribute small punctual strains of the kneecap broadly and therefore virtually dissolve the pressure on knee and kneecap. The consequences: less strains, barely any pain, more comfortable working.

**ALPRO® knee protectors were developed in cooperation with the association of commercial and industrial workers' compensation insurance carriers.**
